Most of these recommended routine maintenance tasks you can do yourself at home for practically no money, as long as you have a few simple tools and the time to invest. The following intervals are based on the assumption that you will be doing the service work yourself, as opposed to paying to have the work done. Because frequent maintenance enhances the efficiency, performance and resale value of your car, we encourage you to follow our schedule. If you drive in dusty areas, tow a trailer, idle or drive at low speeds for extended periods, or drive for short periods less than four miles at a time in below freezing temperatures, even smaller intervals are recommended. Diesel engines last longer and burn less fuel per mile, but do require more and different maintenance than a gasoline engine. In many cases the initial maintenance check is done by the dealer at no cost check with the service department when you buy the truck for more information. However, it must be checked and adjusted if it has been removed and reinstalled. It might be necessary to check and adjust it when troubleshooting a performance, emissions or noise problem. In Japan it was originally known as the Mitsubishi Forte [1] and from as the Strada. For most export markets the name L is used [2] [3] [4] though it also been known as the Rodeo , [5] Colt , [6] Storm , Magnum , L Strakar badge used in Portugal since , Strakar is a portmanteau of Strada and Dakar , [7] and others. Cumulative sales of the first three generations exceeded 2. In Japan, it was previously sold at a specific retail chain called Car Plaza. In , Fiat Professional launched a rebadged version as the Fiat Fullback. The first generation model of Mitsubishi's compact pickup truck was first sold in Japan as the Mitsubishi Forte in September and continued until late , when the line was cancelled in the Japanese domestic market for five years. Offered in basic Deluxe trim, the larger-engined version was also available in leisure-oriented Custom trim. In export versions, the 2. Mechanical features included recirculating ball steering and front disc brakes , rear-wheel drive , and front suspension with coil springs. In low-range, the vehicle travels at half road speed for any given engine rpm. The Dodge Ram 50 called the Dodge D for and was a badge-engineered version sold by the Chrysler Corporation from on. The label lasted until , through two generations. Plymouth also received a version of the vehicle known as the Plymouth Arrow Truck, sold from to Mitsubishi itself imported it as the Mitsubishi Mighty Max when it began selling directly in the US from , at which point the Plymouth ceased to be available. The Dodge version had quad rectangular headlights beginning with the facelift, while Mitsubishis and earlier Dodges had single units in North America. In the rest of the world, importers could choose between single or double rectangular units, as well as twin round headlights. Four-wheel drive was added for This created the Power Ram 50 in the United States, as in Dodge's nomenclature the "Power Ram" name was used for four wheel drive models. A turbo diesel engine was available in US models between and The second generation model was introduced in for most markets. In Australia, this model launched in October as the low-cost Triton. In Japan the pickups were not sold for a few years, making their return as the Strada in

Japan in March Sales in the Japanese domestic market continued into the middle of The second generation Mitsubishi truck was also produced in Thailand. Starting out as a fairly utilitarian truck, more comfortable versions were gradually added in most markets. The V6 was not a well liked engine specification by consumers, as it did not tow as well or make as much torque as the diesel four-cylinder engine did, and used much more fuel than the four-cylinder. The 3. Four-wheel drive non-LSD was also available, as were a four-speed automatic transmission, two bed lengths, and both regular and Macrocab extended cab options. There was also a higher-rated One-Ton model available on regular cab models with the longer bed. In later years the standard engine was switched to a 2. This engine was made standard fitment on all two-wheel drive Mighty Maxes for the model year, while four-wheel drives all received the recently introduced 3. The Ram 50 was redesigned for , which was the same year Chrysler introduced the Ram 50's successor, the Dodge Dakota. Despite this, sales of the Ram 50 continued for another seven years until , possibly because the Ram 50 was a compact and the Dakota was a mid-size. The difference in size and cost left a niche for the Ram 50, and its cancellation may have been due more to a desire to show independence from Mitsubishi than because of any product overlap. The Mighty Max was taken off the US market after the model year, and its successor was not marketed in North America due to poor sales. In , a new generation model was introduced with 2. Other engine options include two sixteen-valve fuel injected gasoline engines and a naturally aspirated diesel. Production ended in These were only built in Laem Chabang , Thailand, and were also exported to Japan between and In late the third generation pickup underwent a facelift with new headlights and other changes. Challenger shares many components and some body panels i. It was retired from production in , but the Challenger nameplate was resurrected for the second generation of the Mitsubishi Pajero Sport, launched in and which is also based on the following generation of the Mitsubishi Triton. The fourth generation Triton was released in Designed by Akinori Nakanishi , it was built exclusively by Mitsubishi's subsidiary in Thailand and was exported to global markets. The car had a 2. The base version, available in some markets such as the Dominican Republic, had a 2. In Japan, the Triton was exclusively equipped with 3. Despite its success overseas, it was a critical failure in Japan as workmen and traders preferred vans and station wagons. As a result, in August the Triton was pulled out from Mitsubishi's Japanese lineup. In , Mitsubishi unveiled the all new L which went on sale in early Asia Pacific and late Europe and the Caribbean. It is powered by a new 2. Since , the current generation L shares the same underpinnings as the newly rebadged Fiat Fullback intended for the European and Middle East markets. In addition, due to being plagued by the previous-generation Triton's critical failure in Japanese market in contrast to its overseas success , in addition to having heavy excise duties for pickup trucks there, Mitsubishi Motors currently has no plans to bring the current Triton to their home market. The fifth generation Mitsubishi Triton was launched in Malaysia in May as the Mitsubishi Triton being fully imported from Thailand. The VGT models came with a 2. The Triton MT had a 2. In September , alongside of the change of engine for the VGT models to a 2. Changes included additional safety features for the VGT models, change in the steering wheel design and different colour choices. The 4x2 Quest model remained unchanged. This model also received a rear air circulator located at the interior roof. From Wikipedia, the free encyclopedia. Shotpeening increases tensile strength and reduces fatigue while lessening the material thickness required. The thinner material allows for increased wheel travel and provides a softer ride. Bolt-style leaf alignment clamps prevent leaves from fanning out and allow the leaves to twist and flex, yielding higher articulation. Each spring is preset using hydraulic stress to reduce fatigue in the steel and prevent sagging. Some applications include leaf springs with steel encased rubber bushings. Other applications include blue urethane bushings. Anti-friction pads are placed between the leaves to reduce friction within the spring and noise from metal-to-metal contact. Tapered and roll-pointed leaves add flexibility and provides an even deflection rate. Tapering allows a smoother transition between leaves as compression takes place, resulting in a softer ride with increased wheel travel. Springs are either cold wound with chrome silicon or hot wound with to guarantee long life. BDS coil springs are designed to withstand full coil bind. In other words, you can smash our coils to totally flat and they will return to their original height. A polyester based powder coat is applied to ensure flexibility and durability. Each spring is preset with a hydraulic stress to reduce fatigue in the steel and prevent sagging. Shotpeening increases tensile strength and allows for maximum wheel travel without sacrificing the life of the spring. We make every effort to buy American and we hope you do as well. Today, as part of Fiat Chrysler Automobiles, Dodge trades on old-fashioned American values such as size, power, and style. The Challenger coupe and Charger sedan are muscle cars that

garner lots of attention thanks to their numerous high-powered SRT and Hellcat variants. What the Charger lacks in interior quality and ride refinement it makes up for with its practical space, available all-wheel drive, and racy V-8 engine options. As a big-bodied, hard-charging, retro-styled coupe, the Dodge Challenger stays truer to the muscle-car ethos than the Chevy Camaro and Ford Mustang do. The Challenger SRT Hellcat has multiple potencies and myriad personalities that make it the most powerful and outrageous muscle car on the market. With its badass style and expletive-inducing acceleration, the Charger Hellcat is a one-of-a-kind sedan that can handle road trips and obliterate drag strips. The Durango is the Dodge for the driver who has grown out of burnouts and muscle cars into kindergarten drop-off duty and home-improvement store runs. While the rest of the automotive world moves toward smaller fuel-efficient engines and EVs, the Dodge Durango SRT is still having a blast with gasoline. What the Challenger lacks in handling finesse, it makes up for with substantial muscle from its great V-8s and more comfort from its roomy cabin. With absurd amounts of power and cool retro looks, the Challenger SRT Hellcat might be a one-trick pony but with almost horsepower, who cares? The Dodge Charger is the choice for buyers that want or need a full-size sedan but prefer not to compromise on performance or practicality. With comfy accommodations and gobsmacking acceleration, the Dodge Charger SRT Hellcat is a mind-blowing way to experience a road trip or a drag strip. With its bold design, high tow ratings, and Hemi V-8, the Durango might not be the most practical mid-size SUV, but it might be the coolest. With a rumbling hp V-8 and three-row comfort, the Durango SRT has muscle-car attitude and performance in a family-friendly package. With its cheap cost of entry and handy fold-flat second and third row seats, the Grand Caravan is good enough for a vacation rental but not much more. With lots of cabin space and an unbeatable price, the Dodge Journey is practical for families on a budget but is ultimately disappointing. Both fast and functional, this affordable muscle machine can compete with pony cars at the drag strip and with full-size sedans on family road trips. Like a classic-rock song, the Dodge Challenger quickens the heart rate and stirs up nostalgia. These high-powered Challengers come in two flavors of badass: the notorious SRT Hellcat possesses a hp supercharged Hemi V-8 while the pumped-up Redeye version has ponies. The Dodge Charger SRT Hellcat is a hp sedan that's built to bully sports-car owners and shuttle adrenaline-junkie families. Strap the kids in tight, secure the groceries in the cargo area, activate the launch-control feature, and watch the tedium of running weekend errands fadeâ€"fast. Reluctant to say goodbye to its family-hauling icon, Dodge continues offering the Grand Caravan for even though it is badly outclassed by both its rivals. Not every new car has the latest technology and contemporary styling, and that includes the Dodge Journey. The Challenger SRT Demon is even mightier than the Hellcat version, boasting up to horsepower and exclusive drag-racing equipment. Despite a thorough update in , the Avenger has become less competitive as it nears the end of its life cycleâ€" was its last year in production. This is the wagon version of the 10Best-winning rear-drive Chrysler , and it oozes with swagger. While marked the end for the fifth-generation Viper, an all-new model is set to debut in New Cars. While the Dart is uniquely styled, it is otherwise a rather disappointing offering. The Nitro is a compact sport-utility with typical in-your-face Dodge styling.
