Account Options Sign in. Top charts. New releases. Add to Wishlist. With more than , vehicle offers, AutoScout24 is the largest marketplace for the purchase and sale of new and used cars in Switzerland. Buy your new car here or sell your used car. From low-priced small cars for new drivers on the spacious SUV for the family up to the exclusive sports car every wish is fulfilled. It was never more convenient to buy a car. Rated with 4. Find offers for a practical compact car, a car with plenty of storage space, a 4x4 vehicle for off-road driving or a sporty convertible. Define the radius at which interesting vehicles should be displayed to you in the perimeter search, and find a dealer for new cars or a seller for used cars in your area. Access your favorite cars anytime and anywhere. Manage your vehicle listings comfortably with your smartphone. With AutoScout24, selling a car is a breeze. For each car we offer you helpful additional data, e. We are at your disposal under helpdesk autoscout Our app is available in German, French, and Italian. Find out here about autoscout Reviews Review policy and info. The vehicle advertisements have been further optimized: - Leasing offers can now be pre-calculated for many vehicles directly in the app - The images in the search results are now displayed slightly larger - Adding favorites has been simplified. We are looking forward to your feedback! View details. Flag as inappropriate. Visit website. Privacy Policy. ImmoScout24 Switzerland â€" Rent a flat, buy a house. Scout24 Schweiz AG. The biggest marketplace for houses, flats and other real estate in Switzerland. MotoScout24 Schweiz. The most popular online marketplace for motorcycles in Switzerland. AutoScout24 is one of the biggest online car markets in Europe. On 4 market places are 2 million vehicles including new and used cars, motorbikes and trucks. The format to resolve or submit data is JSON. To access most of the endpoints, you need to be authenticated, using the OAuth process. These pages are the main source of documentation for developers working with our API. If this is your first time getting in touch with AutoScout24 API, we recommend to carefully read through these pages. Should this comprehensive online documentation not answer your questions please feel free to contact us using the following E-Mail address: daten autoscout In addition, the JSON responses contain additional hypermedia information of related resources. Register your application by contacting AutoScout24 via E-Mail daten autoscout While registering your application you need to provide your redirect URL and your scope. Store these credentials, as you will need them to authenticate your application against the API. AutoScout24 has always been working towards empowering its users, and the API is no exception. However, many factors could affect the underlying design of the API. While change might be considered difficult to handle, it often has a great value for your application, and hence your business. Change might come in many different forms. However, API changes can be classified into two main categories: compatible and incompatible changes. When AutoScout24 releases new changes that are considered compatible, then client applications that integrate with the AutoScout24 API should not be affected. On the other hand, introducing incompatible changes will go through a defined process so that client application developers can handle the introduced changes. AutoScout24 will identify whether the released changes are compatible or incompatible. This helps the consumers of the API keep track of the latest changes and handle any incompatibility. AutoScout24 has set a philosophy when introduce new changes to its API consumers. This philosophy helps both the API consumers as well as AutoScout24 benefit from the introduced changes on both technical and business aspects. When there is a need to introduce changes to the AutoScout24 API, then these changes will be classified into compatible or incompatible changes. If compatible changes are introduced, then they will be released and the consumers of the API will be informed about the change. Client applications should continue working without problems when introducing such changes. On the other hand, when incompatible changes are introduced, a new version number is attached to the API to reflect the status and changes of the API; this also includes communicating the changes to the consumers of the API so that they can take proper actions to adapt their applications. In addition, when introducing such incompatible changes, developers will have a six-month period to migrate to the new released version. There are also client libraries available in a number of languages that you might find useful. For GET, include them as query parameters. In both cases, URL encode the parameters. After successfully entering their credentials the user authorizes your application to access their account. If the user clicked Grant in the previous screen, AutoScout24 will redirect to the URI you specified earlier with a code parameter and will provide you an authorization code. Once your application has completed the above section and gotten an authorization code, it will now need to exchange the authorization code for an access token from AutoScout Each refresh token is valid for 14 days. All you need to do is set it in the authorization header like this:. AutoScout24 also includes the error-description attribute to provide developers a human-readable explanation that is not meant to be displayed to end users. The following codes can be returned as a value for the WWW-Authenticate header. These response objects contain codes that can be evaluated by the

in your system you will need to update them to the new format before doing any request on images. The following possibilities are available: - Retrieve entire list of images for a vehicle. After the change it will not be possible to upload multiple times the same image same md5 checksum for the same vehicle. PUT method for update an image will be deprecated and no longer be available after 31st July Please make sure that your application is no longer using this functionality until the end of July I Data providers can now retrieve customer details including the customer identification number Sell-ID for a valid access token. Dealers can now retrieve the statistics of their entire stock as well as their individual vehicles. This would enable dealers to offer their customers the opportunity to get a financing offer when buying the vehicle. A dealer can now create, update, retrieve, and delete one financing offer for each vehicle. The link to the detail page is now returned when published a vehicle on a specific channel. This header is mandatory for all the requests to the API. A new data structure is introduced that unifies what the API responses look like. In addition, Hypermedia is used to represent the relationship to other resources. The new data structure will replace the old data structure that was used in v1. How to deal with change Change might come in many different forms. The following timeline example demonstrates how API changes could be introduced: Version 1. Consumers of the API use this version number to send requests and receive responses. Compatible changes are introduced. Consumers of the API will be informed about the changes. Consumers of the API will be informed about the changes, and they will be given a period of six months to migrate to the new API version. After six months of releasing API version 1. All API requests with version 1. While registering your application you need to provide the following information Your redirect URL. Attention: Please note that dynamic URIs are not supported. You have to provide static URIs. Handling the Response from AutoScout24 If the user clicked Grant in the previous screen, AutoScout24 will redirect to the URI you specified earlier with a code parameter and will provide you an authorization code. Check the value of the code param in your request. The error parameter will always be present in case an error occurs. A common problem is the first character being something besides a letter. This object is mostly needed for debugging, logging, and monitoring purposes. This object is mainly used when sending GET requests to retrieve information. For list of codes please click here.. This text can be utilized by showing it to the end user of client application. Resource - Vehicles This resource manages the complete lifecycle of a vehicle on the AutoScout24 marketplace. A unique international code including a serial number used to identify individual motor vehicles, towed vehicles and motorcycles. This warranty must be included in the final vehicle price. If this attribute is not transmitted then no additional warranty is being granted. Only the following values are allowed: 1, 2, 3, 4, 5, 6, 7, 14, 21, 28, 42, 60, 90, , , , Needs to be set to TRUE in this case. The classification is in accordance with the European Standard Euronorm. These fuel types can also be consumed by the vehicle but have higher emissions than the primary fuel type. This information will not be shown on the AutoScout24 platform. Can be used by potential buyers as a reference when contacting the seller. Will be shown on the AutoScout24 platform. Currently only Euro EUR is supported. Formatting Options: Vehicle description Field The free text describing a vehicle field description can be formatted using certain formatting elements. After each bullet point a line break needs to be inserted. A particle filter is only available for diesel vehicles. Below you can find the attributes that this object has. Resource - Images The Images resource is a sub-resource of the Vehicle resource. Using this method only one image can be uploaded at a time. Images are attached to the vehicle one after another. Initial image order is therefore dependent on successful upload dates and can be changed later. Images will be

shown according to selected ad product: Premium Ad Product T30 : max. The index of each String value in the array represents the the order of the image. Resource - Videos The Videos resource is a sub-resource of the Vehicle resource. Using this method only one video URL can be attached. The video can be only a youtube video. Accept String Yes The mediatype to be received e. Resource - Publications The Publications resource is a sub-resource of the Vehicle resource. If the value of this header is not specified, then the default culture en-GB is used. Please note that it might take a couple of minutes before the URI becomes available. Resource - Products The Products resource is a sub-resource of the Vehicle resource. Please note that product bookings will be charged to the dealer in question on a daily basis. Semantic Rules The following semantic rules are applied when booking an ad product to a vehicle. Content-Type String No The mediatype used for the body of the request. Please note that AutoScout24 can only add one financing offer per vehicle at the moment. Semantic Rules Financing offers are only accepted for vehicles inserted by German, Italian, Dutch and Belgian dealers. Only one financing offer can be added for each vehicle. If the cost of this contract cannot be determined in advance, please indicate the obligation to conclude this contract e. Currently only Credit type can be selected. At the moment, only one offer can be added and retrieved for a specific vehicle. Currently, only one financing offer can be added and retrieved for each vehicle. Currently, only one offer can be added and retrieved for a specific vehicle. Resource - Statistics The Statistics resource offers information about the performance of vehicle listings. Semantic Rules Statistics are calculated on a daily basis. It takes 24 hours to update the entire stock statistics. The start and end URL query parameters are used to filter statistics results based on start and end date. Statistics are available for the past days of the day of calling this endpoint. PerformanceStats Object Field Name Type Description start date The start date of the period to which the performance statistics have been returned. Emails Object Field Name Type Description totalCount integer The total number of emails sent to the dealer within the specified date period. Calls Object Field Name Type Description totalCount integer The total number of calls the dealer has received within the specified date period. The first statistics result might take up to 24 hours after having the vehicle listing on the AutoScout24 marketplace. Statistics results can be filtered based on a date period. This value is calculated once a day. Please note that AutoScout24 supports only one video upload currently. Searches Object Field Name Type Description totalCount integer The total number of appearances of the vehicle in the list page of any search criteria within the specified date period. Views Object Field Name Type Description totalCount integer The total number of detail page views of the vehicle listing within the specified date period. Leads Object Field Name Type Description totalCount integer The total number of leads of the vehicle listing within the specified date period. Emails Object Field Name Type Description totalCount integer The total number of emails sent to the dealer for the vehicle within the specified date period. Printouts Object Field Name Type Description totalCount integer The total number of printouts of the vehicle listing within the specified date period. Calls Object Field Name Type Description totalCount integer The total number of calls the dealer has received for the vehicle within the specified date period. Resource - CustomerDetails The CustomerDetails resource is used to display customer details based on the authentication token. Resource - Models The Models resource is a sub-resource of the Makes resource. Resource - Seals The Seals resource offers the needed endpoints to retrieve information about the available vehicle seals that are supported by the AutoScout24 marketplace. Response also shows which country a given seal is valid for e. German dealers should only attach German used car seals to their vehicles. Please note that all vehicles possessing a used car seal are subject to further checks by AutoScout Vehicles might therefore be listed without the initially requested car seal. If the value is null, it means that vehicleType is not applicable to the Reference Type. A null value indicates that the country is not applicable for the refernce type. Errors Responses Responses as well as messages are classified by their type: Type MessageType Description Response Code Range Success None A request has been processed exactly as requested None Success Info A request has been processed exactly as requested, however the response contains information for the client - Success Warning A request has been processed, but not excatly as requested e. Please try again later. Please provide missing object. Please provide expected date format. Please provide missing field. Please use EUR. Please use numeric values only. Please provide expected format. Please provide a valid json. Please use C or B. Please provide supported make. Please provide supported model. Please remove the duplicate values. Please remove existing channel first. Please post one picture per request. Please provide correct customerId. Therefore, it can not be deleted. Please remove existing booking first. Please provide necessary header values. Per vehicle only one set of contact details is allowed. Please provide a valid json body object. This vehicle cannot be published without contact. Please provide supported seals. Only one financing offer per vehicle is

day of the emails sent to the dealer for the vehicle within the specified date period. The total number of calls the dealer has received for the vehicle within the specified date period. The average value per day of calls the dealer has received for the vehicle within the specified date period. Enumeration value of what Reference Type this object is. An array of the countries to which this reference instance can exist. A request has been processed exactly as requested, however the response contains information for the client. A request has been processed, but not excatly as requested e. Field particleFilter does not correspond with selected field fuelCategory. Wrong booking rule for this customer - Product booking via interface is not possible as customer profile is set to automatic booking rule. A contact for this vehicle already exists. A financing offer for this vehicle already exists. Provided decimal has an invalid number of decimal places. Success Response, ImageID: fa1bdff-6cf13d6bf, number of images: 1. Success Response, ImageID: 6fb6d93ca-a0aa01cab, number of images: 2. AutoScout24 is the largest online marketplace for cars in Europe and offers about 2 million vehicles. With the AutoScout24 app you can access the online car and motorbike marketplace anytime from anywhere. The very useful SearchAlert informs you as soon as a supplier uploads a car or motorbike on AutoScout24 that fits to your enquiry. Therefore you won't miss a bargain ever again. In the AutoScoutmagazine you may find not only interesting test reports about vehicles but also all about cars, car purchase and sales. AutoScout24 on iPad so great and fantastic! Perfect usability, fast loading time, just brilliant!!! It is really impressive. You find very fast your dreamcar. Using the GPS-datas even in your vicinity. Nice scrolling, brilliant contact possibilities. The reference for car search via App! Write us to apps-com autoscout Please consider that we can not answer any reviews. So if you need support please contact the support-mail address or the feedback function in the App. Enjoy the newest version of the app: we made some minor tune-ups, bug fixes and performance optimisation for an even smoother ride with AutoScout I have now had this app in some form for close to eight years now so I know that the app has had the ability to sort in this fashion before and then it got removed. As a result it is now much harder to narrow down my favorites list since many sellers do not know the correct horsepower figures for their vehicles making the sort by power function cumbersome as well. One of the most useful and rich app that satisfies my needs when I want to buy new or used car. It also give me a lot of options to filter cars by with a rich context. The made of that app is great, easy to use, nice cars to buy here in this app but i am so s
