Curt wiring harness

Your question might be answered by sellers, manufacturers, or customers who bought this product. Please make sure that you are posting in the form of a question. Please enter a question. They are built with some of the most advanced technology in the industry, and each one is custom-fitted to work with a specific make and model. Some automotive manufacturers install a special socket on the vehicle to be used for vehicle-to-trailer wiring. Although this special socket is not equipped on every vehicle, a CURT custom wiring connector -- also called a T-connector -- utilizes the socket for simple, stress-free installation. Rather than requiring you to cut, splice and solder into your vehicle's wiring system, the custom wiring connector uses a single OEM-compatible plug and instantly provides a standard, universal vehicle-to-trailer wiring connection, typically in the form a 4-way flat. All CURT custom wiring connectors are made vehicle-specific for the easiest possible installation and the best fit. This particular plug-in connector provides a 4-way flat socket and is designed to be a custom wiring option for certain years of the Toyota Highlander and Lexus RX factory tow package may be required; to verify your vehicle compatibility, see application info. It comes with all necessary hardware to establish a solid connection. It also comes with a dust cover to keep the connector socket clean when not in use. To ensure long-lasting reliability, all CURT custom wiring connectors are thoroughly tested for optimal functionality. Stress is the last thing you should feel when towing a trailer -- whether you're hauling your RV to that favorite camping destination, your ATVs up to the hunting grounds or your fishing boat to the new hidden hotspot. At CURT, we think your towing equipment should add to the enjoyment of your experience, not detract from it. CURT offers custom trailer hitches, electrical products and a complete line of towing accessories to get you there with confidence and enjoy every mile of the journey. A CURT custom trailer wiring harness is the easiest way to equip your vehicle with the proper electrical connection for towing a trailer. Our custom wiring offers simple, plug-and-play convenience with no cutting or splicing required, and provides a reliable connection for powering your trailer lights. Best of all, each CURT custom trailer wiring harness is made vehicle-specific for a unique make and model. This makes installation hassle-free and ensures optimal performance with your vehicle. CURT offers two types of custom trailer wiring: custom wiring harnesses and custom wiring connectors. Both are made for specific vehicles, and both require zero cutting or splicing. This simply requires access to the taillight wiring. A custom wiring connector uses a single plug to plug into a designated OEM socket on the vehicle. Not all vehicles are equipped with this socket, but it does make installing very easy. Each custom trailer wiring harness and connector is made for a specific make and model, featuring the necessary components to provide a standard trailer wiring output. Whatever your lifestyle, choosing the right CURT custom trailer wiring harness for your vehicle is easy. Simply use your vehicle's year, make, model and style. The high-quality components used in our custom trailer wiring create very little resistance to reduce heat, limit voltage drop and extend the life of the circuits. SMT is manufactured with automated processes for maximum consistency and the highly efficient circuitry promotes optimum intensity and life for the trailer light. Surface mount technology is able to better withstand shaking and vibrations, conditions that are common while towing, compared to traditional through-hole-mount tech. Skip to main content. Buy new:. I made the mistake of trusting the etrailer. I have my original sticker for my vehicle which states that is has the tow package, which apparently only means it has the transmission cooler installed but no converter or flat 4-wire trailer plug for trailer lights. I did my research and verified the transmission cooler was installed by looking at the front air dam on the driver side through the small lovers and seeing the cooler itself, check. Then I opened the rear hatch and removed two rear floor panels and driver's side rear corner panel which revealed a black plastic tub held by two thumb screws. Remove the screws and you will find a small rectangular white plug, this is where the pig tail will plug in to go to the trailer lights. I cut a slit in the 2" rubber grommet and fed the pig tail through it to the rear hitch. I drilled a few small holes in the plastic underneath the rear bumper and used some zip ties to secure the wiring in place. After taking 15 minutes to perform the above task when I purchased CURT T-Connector only, a few days later I arrived at the U-haul dealership on a Friday evening to pick up the trailer to use for our 2, mile cross country move. I hooked up the tail lights and they did not work. Next, I broke out the manual to check the fuse box layout and found that the 30A towing fuse was not installed and I was like "DUH" so I installed a spare and the light still did not work. I took the trailer home to figure it out there and that is when I discovered I was missing the converter. The first clue to check and see if your Toyota is pre-wired for towing is to check and see if the fuse has been installed for towing in the fuse box. This is located under the hood on the driver's side. Next, check to see if the converter is installed which is under the dash on the driver's side. You should see a large white male rectangular plug. If there is nothing plugged into it, you are missing the converter. I wanted to take the time and share my experience, especially if your Toyota has the tow package. The install was effortless in my Toyota Highlander. I highly recommend removing the rubber plug in the area where you mount this under the cargo mat in a cavity to the left as you're standing behind the vehicle looking in , and running the wires through there instead of having to run them out the back gate whenever you need them. By doing it this way, the wires drop out the bottom of the car and you can secure them with zip ties over to the hitch. So as most folks said this is very easy to install. I installed it in a Highlander Hybrid. Plenty of videos on the internet as to how to reach the wiring in the back of the vehicle so check those out. But there are a few things you should know and reading this should make it easier for you than it was for me. Once you get to the point where you have removed the pieces and hooked up the two connectors, you have two decisions to make. First is whether to drill a hole for the ground wire screw provided or use a screw or bolt already in the vehicle. The second decision is where to put the 4-pin plug inside or outside the vehicle. I think the best option is to leave it inside the vehicle unless you will be using it a lot. You run it to the compartment where the spare tire tools are. Also, if it is outside the vehicle it can corrode, the wires can be cut, it can be damaged, etc. The only downside is it sticks out the back of the vehicle when in use, so if you are anal and don't want to see the wires then run it under and mount it. If you do run it under, the hybrid drain hole is in a different place from regular Highlanders, or at least it was from the one I saw in the video for a non-hybrid. I was confused by a video of a non-hybrid which showed the drain plug against the back of the vehicle i. Well, I could not find where in the manual to put the "trailer" fuse, but I watched the etrailer video and kind of "guessed" where it was from that. There were only 2 possible places for it and it's the one closest to the front of the vehicle. Next, you must

test your installation. Do yourself a HUGE favor and buy a tester. Did I mention you should buy the tester? Close the door manually and it should work fine after that. By Aceman on October 20, Images in this review. I was bored with the stay at home stuff so I decided to install this myself. I watched the you tube video for this product and proceeded. I wanted it routed underneath the car and bolted to the hitch. I pulled that out and snaked the connector end up through the well and into the rear compartment. I split the grommet and ran the wiring through it, replaced the grommet and silicone sealed a round the grommet and wiring. Then you just plug in the connectors and put everything back in place. I had never done a wiring so if I can do it, you can. See all reviews. Top reviews from other countries. Make sure you read the instructions carefully. It fits several models and the instructions are specific for each model. The instructions are good and installation is straight forward as long as you are a contortionist! Kit has everything you need and more and is of good quality. Report abuse. Left turn signal input form car caused both left and right outputs from the controller to flash. Seems to be a lack of quality control at CURT Bought a hitch and controller for my highlander Hitch was bent over 3 inches and the controller was defective. Two purchases and Two problems not great odds. Extremely easy installation, works great. No issues! Search you tube for the video to help with your installation. Doesn't get much easier than this. The mechanics that I take my SUV to for work did the install and did not mention problems. Came to me fast and appears to be the right wiring for the trailer I want to pull. Thank you. Perfect fit to existing connectors in the back of the SUV. Included everything, including fuses. Easy to install. Pages with related products. If your vehicle is not equipped with wiring for towing a trailer, CURT custom wiring is the ideal solution. A custom wiring harness -- also called a T-connector -- is a simple, plug-and-play electrical device that plugs into your automotive electric system and provides a standard, universal trailer wiring connection. This is done using two or more vehicle-specific, OEM-compatible connectors to plug into the taillight assembly, eliminating the need for cutting, splicing and soldering during installation. Custom wiring harnesses are made vehicle-specific, and while they are not available for all vehicles, they do offer one of the fastest, easiest and most secure ways to wire a vehicle for towing. This particular plug-in harness provides a 4-way flat connector socket and is designed to be a custom wiring harness to fit certain years of the Nissan Versa sedan without LED taillights to verify your vehicle compatibility, see application info. It comes with all necessary wiring components to establish a reliable trailer wiring connection, as well as a dust cover to keep the connector clean when not in use. You have a picture in mind of your next destination -- maybe its the boat landing at your favorite fishing spot, maybe its a campsite that overlooks one of natures masterpieces, or maybe its the next big jobsite. However, turning that picture into a reality takes more than just daydreaming. It takes a solid connection and the right amount of power. CURT custom wiring is made with some of the most sophisticated technology in the industry and is designed to install with ease, giving you a long-lasting electrical connection for your towing hitch setup. CMI aspires to be the industry leader by recognizing that the customer is King and that our people are our greatest asset. Our items ship from various warehouses around the United States. We will ship from the warehouse closest to your location to speed up transit times. Our items typically ship within 1 business day, most often within a few hours of ordering. For this reason, we usually cannot cancel an order once it's placed. Please check with the manufacturer to verify fitment of all parts based on part number. At the moment, we only ship to select countries using this program. All associated fees will be paid upon receipt by the buyer and are not included in the auction price. Compatibility chart and application-specific wording in this listing are based specifically for USA market vehicles. Fitment is not guaranteed on international vehicles, as many manufacturers use region-specific options. Please do not add notes to your order. Our systems are automated, and the notes are not read. If you have any questions about your order, please contact us prior to ordering. Customers are responsible for verifying the legality of shipping products into their states. Orders placed for items that are restricted in the delivery

state will be cancelled. We accept payment via PayPal for eBay orders. For shipments to Massachusetts addresses, we are required to collect 6. We accept returns on all new items for an eBay best period of 60 days. New items must be in original packaging including plastic wrapped items , uninstalled, and in factory new condition. Please contact us for a return authorization and shipping address. Return shipping is paid by the buyer on items that are not defective or damaged. We only sell factory new parts, no exceptions. Occasionally, an item is defective from the manufacturer, or damaged in transit. Stuff happens, but when it does, we'll take care of you. Contact us right away and we'll get you a prepaid label, schedule a pickup, and get a replacement sent right out. Returns are not accepted on international orders and the seller does not accept responsibility for damage in shipping. Be the first to write a review.
