Gmc 90

The model line was sold in passenger van and cargo van configurations as well as a cutaway van chassis that served as the basis for a variety of custom applications. Produced across three generations, the model line was sold under a wide variety of model names under both the Chevrolet and GMC brands. The first General Motors van was the Chevrolet Corvair -based Chevrolet Greenbrier van, or Corvan introduced for , which used a flat-6 opposed rear engine with air cooling , inspired by the Volkswagen bus. Production of the Chevrolet Greenbrier ended during the model year. First-generation Chevrolet van refers to the first G half-ton production years through General Motors saw a market for a compact van based on a modified passenger car platform to compete with the already successful Ford Econoline and Dodge A The Chevrolet van had a cab-forward design with the engine placed in a "doghouse" between and behind the front seats. The implementation of situating the driver on top of the front axle with the engine near the front wheels is called internationally a " cab over " vehicle. Engines and brakes were sourced from the Chevy II , a more conventional compact car than Chevrolet Corvair. A first-generation is identified by its single-piece flat windshield glass. The first Chevrolet van was originally marketed and sold as a panel van for purely utilitarian purposes. Windows were available as an option, but were simply cut into the sides from the factory. In , Chevrolet added the "Sportvan", which featured windows actually integrated into the body. GMC marketed its window van as "Handi-Bus". Air conditioning, power steering, and power brakes were not available in the first-generation vans. The new van was of simple construction and its box shape was designed to maximize the hauling of cargo, tools, and equipment. The base cargo model was the Chevyvan, available with or without windows and side cargo doors. Basic amenities such as a heater and a right-front passenger seat were options. The Warner 3-speed manual transmission was standard with a column shift. A 2-speed Powerglide automatic transmission was optional. The model year included minor changes. The grille openings were widened and received one additional slot just above the bumper to increase cooling. Seat belts were added. The Sportvan was more of a passenger-friendly van with windows molded into the van body. A retractable rear courtesy step for the passenger side doors was used on the Sportvan. The last model year of the flat glass front end on the Chevrolet vans was Changes included the addition of back-up lights, the side emblems were moved forward and now mounted on the front doors, and the antenna location was moved from the right side to the left side. The base model "Sportvan" now had two additional trim packages available: Sportvan Custom and Sportvan Deluxe. These featured available upgrades such as chrome bumpers, two-tone paint, rear passenger seats, interior paneling, padded dash, and chrome horn ring. In , the Chevrolet van received a major facelift, including moving the headlights down to a new redesigned grille; larger, rectangular taillights, and a curved windshield. The forward control cab design was retained, but the doghouse was lengthened, widened, and slightly relocated in order to fit an optional Chevrolet Small-Block engine. Engine cooling was improved with the addition of an optional larger cross-flow type radiator and a redesigned front that included a low-profile tunnel allowing more fresh air to the radiator. Power steering and "conventional" air conditioning with dash vents and controls were never available on the second-generation van. The headlights were relocated into a new grille, the rectangular taillights were longer, and the windshield was new. The model year was the only early second-generation that did not have side marker lights. The forward control cab design was retained, but the doghouse was widened and lengthened to fit the optional V8 Chevrolet Small-Block engine. Engine cooling was improved with a redesigned doghouse, the addition of a larger optional cross-flow type radiator, and a redesigned front floor tunnel to provide more outside air to the radiator. The G featured heavier suspension, a bolt rear axle, and increased hauling capability with wheels having a 6-lug bolt pattern. The G model was available only on the inch wheelbase version. Brakes were now upgraded to a safer split system including a dual reservoir master cylinder. This was the first year that Chevrolet vans had side-marker lights, mandated by federal government regulations. The front lights were located in the middle of the front doors, while the rear marker lights were located about a foot inward of the rear edge just below the vertical middle of the van. For the model year, the 3-speed TH Turbo-Hydramatic automatic transmission was an option. This was not a typical AC setup with dash vents and controls, but a roof-mounted unit with a single blower duct that had adjustable louvers to direct airflow. The AC unit was independent of the cabin heater. It was operated by a single knob on a roof control panel that turned on the AC and allowed the selection of fan speed. With no actual temperature control, the fan speed was the only way to adjust for the desired comfort level. The model year was the last year of the square styling, front drum brakes, and I-beam front axle. It is referenced in the owner's manual, but not mentioned in the dealer brochures. The 3-speed automatic and manual 4-speed column shift continued to be available as transmission options. Air conditioning may not have been available for the model year. It is not listed as an option in a detailed page brochure, and unlike , there is

no mention of it in the owner's manual. In April , [citation needed] GM introduced the third-generation G-series vans as model-year vehicles. In a complete redesign of the model line, the vans adopted a front-engine configuration adding a hood to the body [1]. In production for 25 years, the third-generation G-series vans became one of the longest-produced vehicle platforms designed by General Motors. In line with the two previous generations, the third-generation G-series vans again used unibody construction, integrating the frame rails into the floorpan; the side panels were constructed of a single-piece stamping. From to , the inch wheelbase was used for cutaway chassis; for , a single rear-wheel version was introduced for an extended-length van body. The front suspension underwent an extensive design change, deleting its leaf-sprung front axle; in line with C-series pickup trucks, the vans received independent front suspension with coil springs and control arms allowing for much wider spacing of the front wheels [2] [1]. The rear axle suspension largely remained the same, retaining a leaf-sprung solid rear axle. The four-wheel drum brakes of the previous generation were abandoned, as the third-generation G-series vans adopted front disc brakes. For its introduction, the G-series model line was offered with three different engines. Alongside a 3-speed manual transmission, the 2-speed Powerglide was offered alongside the 3-speed Turbo-Hydromatic automatic. As part of the model update, the powertrain line underwent further revision, with the six dropped from G-series vans entirely; GM began the use of metric displacement figures. For , a 6. For , the four-barrel carburetor for the V6 was replaced by throttle-body fuel injection TBI , with the 5. Alongside three-speed and four-speed manual transmissions, the G-series vans were offered with three-speed and four-speed automatic transmissions. For , a fuel-injected 7. For , manual transmissions were discontinued and the four-speed automatic became standard equipment on nearly all body configurations; [3] for , the 4L60E and 4L80E 4-speed automatics renamed from THMR4 and THM, respectively replaced the three-speed entirely. While the gasoline engine offerings would remain largely unchanged after the model year, the 6. For , the 4. As part of the shift to a front-engine design layout, the body received a conventional hood, allowing for access to the engine from outside of the vehicle. Prior to , the G-series cargo van was sold with only a driver's seat with an optional passenger-side seat. Similar in appearance to the European Bedford CF introduced by GM subsidiary Vauxhall in , the G-series vans differed from one another in divisional badging. Alongside fender badging, Chevrolet badging was centered within the grille while GMC lettering was placed on the hood above the grille. In contrast to the "Action-Line" pickup trucks, the vans are fitted with a horizontal-slat grille. For , the rear bench seats were redesigned in passenger vans, allowing them to be removed without tools. For , the exterior underwent a revision; along with minor changes to the fenders and the introduction of larger bumpers, the grille was redesigned. The dashboard was redesigned with recessed gauge pods and an angled center console, a design that would remain in use through For , the grille saw a minor revision, adopting larger side-view mirrors for the doors. A locking steering column with column-mounted ignition switch was introduced for , with the model line relocating the dimmer switch and wiper controls on the turn signal control stalk. As a one-year-only option, GM offered window glass on the left-side rear door in place of both rear doors or neither. For , the G-series van underwent a set of minor exterior and interior revisions. While retaining the dashboard from , a tilt steering column was introduced sourcing the steering wheel from Chevrolet mid-size sedans , moving the manual transmission shifter from the steering column to the floor. For , GM introduced an extended-wheelbase version of the G-series van on 1-ton series vans. While trailing Ford and Dodge by over a decade, the design was the first produced on an extended-wheelbase design. In line with previous versions, two headlights remained standard on cargo vans and lower-trim passenger vans with four headlights as an option on higher-trim passenger vans. Several safety features were phased in during the production of the final model update. For , a brake-shift interlock requiring the brake pedal to be depressed to shift from park was introduced. For , a driver's side airbag was added to all vehicles under 8, lbs GVWR , the new steering wheel coincided with the introduction of an updated instrument panel. For , to bridge the gap between the G-series and the P-series stripped chassis, a heavier-duty version of the G30 cutaway chassis was introduced. For the model year, the third-generation G-series van was renamed the "G-Classic" and was pared down to versions with a GVWR above 8, pounds; sales were ended in the state of California. As with previous generations, the model line was again named the G-series van distinct from the intermediate GM G platform. Offered in 10, 20, and 30 series, the Chevrolet Chevy Van cargo van and Chevrolet Sportvan passenger van were joined by multiple nameplates through the production of the third generation. Revived from the Tri-Five station wagon series, the Beauville was the highest-trim Chevrolet passenger van, offering upgraded seats and interior trim. The Bonaventure was produced during the s as an intermediate trim level between the Sportvan and the Beauville. As conversion vans were

outfitted by second parties, such vehicles were badged with the Chevy Van and GMC Vandura cargo van nameplates. The vehicle used a Union Carbide cryogenic fuel cell to power a horsepower electric motor. It never went into production due to cost issues and safety concerns. From Wikipedia, the free encyclopedia. The Astro and Titan would become the final trucks of the type assembled and marketed by General Motors, following the exit of Chevrolet from heavy truck sales and the creation of the Volvo GM joint venture. Distinguished by its boxy appearance, it became nicknamed the "Crackerbox". In the late s, as American truck manufacturers introduced updated designs for cabover trucks, design work began on an all-new Class 8 cabover. Expanding the product line to the Chevrolet brand, the replacement for the GMC Crackerbox sought to expand interior space, visibility, and driver ergonomics. In contrast to the Crackerbox, the cab of the Astro was lengthened nearly six inches into a inch BBC length with two sleeper cab configurations available. Along with the Dragfoiler roof spoiler, the option package included body extension panels between the cab and trailer, an air dam below an extended bumper and an optimized radiator grille. Following the launch of the cabover product line in , the GMC Astro quickly exceeded the Chevrolet Titan in sales and market share. A major factor leading to the cancellation was lack of support for heavy-duty trucks by Chevrolet dealers. In addition to light trucks, this meant a potential GMC franchise needed the ability to support medium-duty trucks, heavy-duty commercial trucks, the GMC motorhome, P-chassis, and school bus chassis. For a typical dealership, this meant dedicating profitable space that would have otherwise gone to selling passenger cars. The GMC Astro ceased production after the model year coincidentally, two years after Chevrolet launched a van with the same name. From Wikipedia, the free encyclopedia. I have hundreds of photos and videos to process over the coming days. The Detroit jammed under the cab of the Titan was spotless with amazing chrome valve colors. No oil leaks here. Excited on lookers claim that it was a V Over the years I have really developed a soft spot for the final years of the GM heavy truck line. These two trucks should give you an indication why. I only wish I was able to hang around long to see the Titan unload. There was also a perfect Chevy Bison on hand. More on that one later. Thanks so much for the great comments and beautiful pictures. I have learned you have one of the few generals with a 60series Detroit in it. I have recently bought a general from a farm in Nebraska and hauled it to my shop in Canada my plan is to put a 60 series ddec2 from an 88 white gmc with a 06r number Was wondering if you could send me some pics so I can make it look correct. Hope you can help me thank you. It was owned by Henry B. Person of Norfolk, VA. Henry personally drove this truck. One of his favorite stories was, a trucker pulled up beside him and said you got a in that thing? Henry said YES on your side! Yes to the V being original and the only reason we restored it. It is the only one we sold as they were intended to be used to pull turnpike doubles or Michigan trains. They were considered very extravagant and tough to make money with hauling 45, pound payload. P says it all 12V engine. There are other engine designations but H and C were the big sellers. Now you know why very few built. The 8VT with similar power much lighter and a whole lot less money obsoleted the V This engine is normally aspirated thus the reason for being so large for the power output of HP. The largest transmission was a RTO which had a lb-ft torque limit so they were sold with 60MM injectors instead of 65MM which produced HP and lb-ft of torque. We restored the truck with a new Detroit Diesel reman engine clone of the original serial number 12VA In the third owner of the truck re powered it with a new 8VT silver engine to save fuel and increase is payload. I was impressed with Detroit Diesel having the original build record of the engine. I did get them to put 65MM injectors in it since we are not too worried about the transmission failing in truck show mode. Please also notice on he front of the cab though hard to read, Henry had Dirty Dozen lettered by a sign painter along with a V12 insignia. Once again, thank you again for the information. Do you know where we can get some interior cab parts? Thanks C. Beautiful Looking Truck. Nice Job Restoring. I keep looking for One that someday would like to Own,when I win the Lottery. Hope to catch a personal look at Your truck next year at Mucungie. Missed it this year,had to work to make the Funds. Darn Nice Truck though! Proud owner of a Titan. NTC Soon to be replaced by a hp Buzzin Dozen. Nuff Said. Bye Bye. They did all of my chrome work. I have a titan with 12v71, and would like to talk to mr lewis. Hello I have a astro 95 not sure of year , I think a ? Have you found a good contact for body parts? Your email address will not be published. Currently you have JavaScript disabled.
