Lt1 stand alone harness

However GM makes calibration changes to each of their Electronic Modules internal software and hardware systems on an irregular basis. Below is original content. Nothing is a repeated myth from the internet or a magazine article. One Example is the 34 Ford on our home page. All circuits are correctly fuse protected. The OBD port and Accelerator pedal connectors will be an appropriate length depending on the donor harness provided. Every wire and connector is tagged with laminated plastic labels that will not fall off or smear. Installation instructions are clear and concise along with detailed graphics. If we are running longer the website will be adjusted to reflect accordingly. Please watch the video What Happens and What to Expect on the contact page for all of the details on timing. At a minimum VATS will need to be turned off correctly and there are numerous other codes that will need to be turned off in the software. We have been aligned with Speartech since January and they know exactly what to do so your engine will run perfectly with a standalone harness. Everything must match exactly. Changes to the High Pressure Fuel Pressure Sensor in have made upward and downward compatibility of the systems not possible without changes made to the harness, sensors and ECM. Please call for more details. A matched set from a single donor can be modified to run perfectly. Believe what you want. See the note about the 34 Ford directly above. The relay will be integral to our fuseblock. We've used LPH on the L83 5. Never has an engine starved for fuel with this setup. The only advantage to an aftermarket "PWM" pump is that you don't need a return line to your fuel tank. In the end, feel free to use whatever pump you like and set the pressure at whatever you want to believe. Does a standard fuel pump cycle for 3 seconds when the key is turned on? Are there any drawbacks to using a standard fuel pump? Use a quality pump from MSD or Walbro and a quality pressure regulator and there will be no drivability, starting or pedal response issues. There's absolutely no need to do so. See above. Can the PWM Fans from the donor be reused? We can tag the wire in the harness that controls the PWM Fan s. Can a standard electric cooling fan be used? Will the Alternator work normally? If a steady state voltage is critical due to big stereo system, off road lighting or winch loads consider having your alternator converted at a local shop to be self exciting. The donor compressor can be set to run full displacement and is perfectly compatible with aftermarket AC systems and Factory AC setups in older vehicles as long as the refrigerant is compatible with both the compressor and system. See the Videos on the FAQ tab for details on how to make the compressor work in your swap. What should I do for gauges? They are truly Plug and Play. What about Power Steering? Each has a unique approach so take a look at their offerings and make your decision based on your unique situation. Can you lengthen the harness? We will add length to the Alternator and AC Circuits if those are relocated due to bracket and mount location changes. Where will the ECM mount if I have you rework the factory harness? What Transmissions can you set the harness up for? Your original factory configuration is the easiest and lowest cost option. Note that any transmission changes must be properly planned for and are quoted on a case by case basis. Can you build a harness to swap a L83 or L86 where an LV3 was? View on Mobile. Our stock harnesses are 4 feet from the rear of engine passenger side. An engine management harness is pretty much what you will find from most wiring harness companies. Basically, it contains all of the necessary functions to make the engine start and run, while also supplying any necessary signals from the computer such as speedometer and check engine light control. There are no main power feeds required for this harness, just a single switched ignition power will switch a relay in the harness that in turn, supplies 12V power to all of the required engine sensors and the ECU. These harnesses are designed for the hot rod, or project car that will be using aftermarket or mechanical gauges. There is no wiring for oil or temperature gauges since the aftermarket usually supplies sending units and wiring for these. All of our harnesses, whether it is a complete custom harness, or our engine management harness, come with an easily accessible DLC Data Link Connector that is usually long enough to be mounted in the passenger compartment. This allows for easy access to the ECU via a laptop or standard scan tool. All of the fuses and relays are labeled on the underside of the covers just like a factory vehicle. Description Additional Information Description. Built From Scratch Stand Alone Engine Harness An engine management harness is pretty much what you will find from most wiring harness companies. Optional braided loom available for an extra charge. Select Your Options. Choose an option Yes No. Choose an option Clear. Our stock harnesses are 4 feet from the rear of engine passenger side. An engine management harness is pretty much what you will find from most wiring harness companies. Basically, it contains all of the necessary functions to make the engine start and run, while also supplying any necessary signals from the computer such as speedometer and tachometer. There are no main power feeds required for this harness, just a single switched ignition power will switch a relay in the harness that in turn, supplies 12V power to all of the required engine sensors and the ECU. These harnesses are designed for the hot rod, or project car that will be using aftermarket or

mechanical gauges. There is no wiring for oil or temperature gauges since the aftermarket usually supplies sending units and wiring for these. All of our harnesses, whether it is a complete custom harness, or our engine management harness, come with an easily accessible DLC Data Link Connector that is usually long enough to be mounted in the passenger compartment. This allows for easy access to the ECU via a laptop or standard scan tool. Harnesses come covered in standard OE split loom. Optional braided loom available for an extra charge. All of the fuses and relays are labeled on the underside of the covers just like a factory vehicle. You must be logged in to post a review. Tags: engine harness , engine swap , harness , lt1 , lt1 harness , stand alone , swap , wiring , wiring harness. Choose an option None Manual 4L60E. Choose an option Yes No. Choose an option No Yes Clear. The transmission on this application is the 4L60E. Any harness can be made to operate a full or no emissions engine. The main reason not to run with full emissions is simple, if the vehicle is below California forget about it. We have computer programs available that allow you the freedom to run a no emissions engine. If you remove the emissions you will gain longer engine life in the process. For special requests Contact SSW. Throughout the next 3 to 4 years the distributor went from non-vented to vented in , with three different timing cover designs and three different distributors from Speed Scene Wiring can help you acquire the parts you need based on your info. These are the standards, before global organization and federal control for all manufacturers. And after total federal control, with standard of communicating language for all cars in the US. OBDIII soon to come will be big brother, this system will notify you with a set amount of time to fix the manufacturer related problem. The fuel injected LT1 went from 2 heated o2 sensor, to 4 heated O2 sensors, 2 pre heated and two posts heated sensors. Our harnesses are all made with top of the line copper strand wire. Each harness comes complete with the necessary relays and its own fused power source. Each harness comes complete with full technical support by phone or online. Our harnesses come completely loomed with automotive grade split loom. We use all GM grade connectors. Installation consists of simply laying out the harness on the motor and plugging in the various devices. We have provided plenty of room for placement of the computer, each harness is exactly 3 feet from the rear of the engine to the pcm, with an overall length of 6 feet from PCM to the furthest sensor connection. We have also supplied the correct rubber grommet to install the computer inside the car. This harness is perfect for dropping any LT1 engine into any vehicle. This harness will work with the LT1 but will require the use of an PCM service number PCM reprogramming is necessary for the correct transmission operation and antitheft removal, your PCM must have as the service number found on the tag. We offer PCM reprogramming separately. A list of connections on the harness is below. Programming must be purchased from the programming page. Please allow working days for order processing. We've got it up and running and have tracked down all the necessary components to start manufacturing complete standalone harnesses for swap projects! Our Gen 5 harnesses and control systems are designed to be used with the factory Gen 6 Camaro ZL1 fuel pump and in-line fuel pressure sensor which is available from your local Chevy dealer or from Rick's Tanks who makes fuel tanks ready to go with the pump for various popular swap vehicles. If you don't want to use the factory fuel pump and in-line pressure sensor, we can set the harness up for use with a regular high-flow fuel pump to be used in conjunction with a vacuum referenced fuel pressure regulator, just let us know. With direct injection and VVT, it's a whole new design and we have stayed ahead of the curve by developing a harness package for this new engine. You have all of the familiarity of our 24x and 58x hook-up design for the all new GM Gen 5 V8! Harness packages are ready to order today! Just like our 24x and 58x offerings, these all new Gen 5 V8 stand alone harnesses are built for full function, closed loop control, and designed for non-emissions use no post-cat O2's, purge canister, or fuel tank evap interface. The standard length of our new harnesses are 3. This length is measured from the back of the engine where the harness forms a single trunk line , to the location of the ECM, and is typically designed for mounting the ECM inside the cabin area. This setup and measurements work for most of our customers, but as always, we can make the harness to your specifications. Just give us a call. All harnesses are covered in our latest high-tech, high-temp woven covering for a durable, show car look. We now offer support for

complete control systems for the LT5 using the 10 speed transmission! Give us a call for info! LT5 - 6. LT4 - 6. Listed programming prices on our site are subject to change on a case-by-case basis. Further explanation will be given when placing your order. Gen 5 LT1 Sensor Package. These engines are different from the LS platform in that the Gen 5 is Direct Injected and operates off an updated engine and electrical platform. We make it simple, 3 wires and your running. Each harness is also Dyno run and tested before we send it out to you. Please let us know if you have any questions of if we can customize anything to make your project. Each harness comes fully labeled with full set of instructions for simple, easy installation. Have Questions? Call or Email us Now. Please let us know if you have any questions of if we can customize anything to make your project that much better. Each harness comes with the following connector provisions, you can always customize your harness- just give us a call! Please let us know if you have any questions, we would love to hear about your project and help in any way we can. At Swap we are driven by the enthusiast and the unique projects that fill our motorsports community. We strive to offer the best products for those projects at the best prices. We focus on the detail of every build making our products above market standard, you get more than you pay for, you get perfectionâ€¦â€¦. Stock Aftermarket. Stock Other. No Yes.
