Sub thump

If you notice that your subwoofer is humming constantly, then it may require a bit more troubleshooting to find the cause. It is possible that the issue is being caused by a "ground loop". Ground loops can often be resolved without spending any money on the problem. The trick is that one needs all of the grounds on all of the gear to have the same potential. Sometimes this is as simple as getting them all plugged in to the same power circuit; sometimes it's a matter of making sure that you're only using modern, three-wire, earth-grounded circuits at all points in your system rather than using old two-prong ungrounded circuits. Changing where things are plugged in, making sure your home power circuits are all properly grounded an outlet-checker from the hardware store can be handy! Beyond that, if your home wiring has serious grounding issues, you may need the aid of an electrician. Although the best and most permanent way to eliminate ground loop hum is by fixing the underlying grounding problem, another simpler way to resolve the problem is to insert an isolation transformer in your subwoofer line to break the ground connection between your source and your subwoofer. For some, there is even an integrated chassis ground connector to help eliminate ground loop hum. AudioQuest Black Lab. Note: When you plug in these directional cables, make sure that the arrow is pointing towards the subwoofer, not the receiver. Monoprice Shielded Cable. Please sign in to leave a comment. Klipsch Subwoofers FAQ. Product Categories. If you're experiencing any of these, please contact our Product Support team for assistance. If your subwoofer s "thump" or "pop" when you are changing inputs on your receiver don't automatically blame the subwoofer. Whenever the receiver loses the audio "codec" signal it should mute all of the pre-out jacks for a short period of time. So when you change inputs or change listening modes and you hear the subwoofer or any speaker "pop" this indicates that particular pre-out jack is not being muted You can have the receiver serviced but before going through that inconvenience try a couple things to minimize the problem. Adjust the gain control on the subwoofer in conjunction with the bass level control in the receiver. You may find a combination of settings that maintain correct bass levels but reduce the annoying "pop" a bit. Check the input settings for each input device. For example, if you know the component will only send a digital signal Do not use the "auto" or "auto-detect" setting. The "Auto" setting can cause the receiver to take a little longer to "lock" on to the audio signal. This delay may exceed the time the pre-out jack is mutedand you end up with the "thump" sound from the subwoofer. Menu 0. Sealed Vented Previous Models Outlet center. Subwoofer - Thump or Pop. Tom V. My new Polk Audio sub woofer seems to have a life of its own. When everything is off except the subwoofer , out of the blue, the unit begins to emit a series of thumping noises from the bottom, which resonate on the floor. Any ideas? May I don't know which model sub, but it do know some subs have an "auto" setting to turn the amp on and off. It is often triggered by the audio input connection to the sub. You could have some noise in that line that occasionally triggers the amp to turn on and later turn off, or if there is a sensitivity setting for the audio signal it is set to low. Some equipment even when off or in standby mode will pass through a signal. Without knowing more about your model sub and the rest of the system it is only guessing. Gunther16 Posts: Do you carry a cellphone when you getsomewhere around it? I noticed whenever I carry my phone and get within feet of my sub it thumps even with the rest of the equipment off. The sub is on standby at the time. Just saying! Gunther is still rockin' the brick. That's why. There is a single connection cable from the receiver to the subwoofer, as per manual instructions. Very strange and annoying. Thanks for your comment. Does it happen every few minutes, or every 15 mins or more? I would first try switching the sub to "ON" vs auto, and see if it goes away. If it goes away, it is likely there is some noise in your connection to the sub that is tripping the auto on feature. The thump is the amp turning on and off. These can transfer noise into the cable. Even though everything is off, there can still be noise in the system or transferred into the cable. If you turn the the sub on with everything else off, see if you can hear a faint rumble or noise from the sub. You may have to get very close to it or put your ear up to it to hear it. If you have another amplifier connected to a speaker, or even a boom box that has RCA input jack, I would try connecting the RCA cable going to the Sub to the other system instead. With everything else off, slowly turn the volume on the amp and speaker or boom box and see if you can hear any noise. If you hear noise, turn the volume down by about half, and try moving the RCA cable location and see if it gets louder or quieter. Move it away from any thing that is making it louder. If you don't hear any change, turn the volume up a little more a try again. This may be easier with two people. June Yup, brickin it. Is there any other way to go? Sign in or Register to comment. A kick drum generally needs 3 things to help it sit properly in the mix; sub, low-mid beef and attack. We dive into 3 steps you can take to EQ a kick drum appropriately for your mix. We dive into 3 steps you can take to tune a kick drum appropriately for your mix. To get the feeling that the kick drum is thumping in your chest and packing in serious punch, you will need to accentuate its fundamental frequency which usually lies between 40hz and hz. Using Waves Q10 EQ , scan this range with a bell curve filter to find the sweet spot, then boost with a focused Q. The kick may sound deep but lack a beefy, full flavor. Its fundamental frequency may be present but be lacking in harmonics. Insert Waves Renaissance Bass on the kick drum, tune the frequency slider to the fundamental and adjust the intensity to taste. At this point the kick should be sounding rich and heavy, but it may lack the attack to help it pop out of the mix. Insert Waves Scheps 73 on the kick drum and tweak the mid-range frequency knob in context of the mix. A boost somewhere between 1k-8k should bring out the attack needed for it to be heard. Our integration harness connects to your Boston Amplifier in your Trunk to provide rca jacks and a 12v trigger for hooking up additional amplifiers. Do you own a Camaro and are wanting to install an aftermarket sub and sub amp? If the answer is yes, then we have the perfect product for you. We have developed an extremely useful plug and play T-harness that will allow you to add RCA outputs to your factory Boston Acoustics sound system. To install the device, you simply unhook the lower connector on your factory amp found in your trunk behind the back wall carpet on divers side and plug our special output harness in-between your amp and stock harness. The harness is designed to give you RCA outputs and a turn-on lead for sending signal and switched power to your aftermarket amp. The simple plug and play feature eliminates the hassle and guesswork of finding which wires to use for your signal and turn-on wires. No more degrading your factory harness by splicing or soldering into it. Don't waste hours trying to get signal to your amp. If you want to cut hours off your install time and make things easier on yourself, pick one of these up today. Please note that this harness provides signal and switched power only. We keep getting the misconception that this will 'run your new amp'. It will not do so by itself. You will still need to provide power and ground wires from your battery to your amp as well. Installs in seconds. Will not work on Non-Boston ie Base Stereo. A good way to tell is if your front door speaker grille has the boston emblem, then you have the Boston Acoustics System. If you are putting a amp in your 15' camaro this is the way to go. Had then wired and hitting in under 20 mins. Images in this review. Audio shop has no clue this exists. Took me 45 minutes to install the harness, amp and sub. I have also ordered the sub stealth box with built in amp. I am very impressed by SubThump and highly recommend them. Plugs into amp with ease but once you plug rca jacks into amp it forces amp to clip into protection mode. Changed amp thinking maybe amp was blown , still clips changed to another amp. Very unhappy with product. I will be returning. Easy to install, easy to setup, and use. Just wish it was a bit more affordable. But it's unique, so it's understandable. If you wanna go more affordable, just go the LOC route, but if you wanna go back to factory stock you'll have a slightly harder time. This harness works perfect. I added a subwoofer to my Camaro SS and couldn't be happier. Only downside is getting the factory harness out of the stock amp, but that's more a GM fault than theirs. One person found this helpful. Best thing ever made to put aftermarket amp in car using factory radio. This harness works exactly as described. It's a real time saver when installing subs in the trunk of a Camaro. Only issue was identifying brown and grey wire. Had to go to Subthump website to identify it as remote turn on. Should be labeled as the other wires are. But I still love this harness, plugs right in to factory amp and provides the hook ups needed. See all reviews. Top reviews from other countries. Translate all reviews to English.
