Vistronic

specializes in components for agricultural machinery. The family-owned company supplies almost all internationally renowned manufacturers. Behind its success lies continuous modernization and holistic software networking based on BySoft from Bystronic. And in such a high quality as required for the cutting of all types of sheet metal. Innovation through collaboration. The laser cutting and bending specialist Bystronic supports start-ups and thus secures itself for the future. Industrial companies traditionally develop innovations on their own. In the future, however, more openness will be required in order to quickly adopt new technologies and implement them in reality. Digitalization in the sheet metal processing industry. Digitalization has long become commonplace, also in the sheet metal processing sector. New products for even more efficient sheet metal processing. Among other things, the sheet metal processing specialist demonstrated how manufacturing environments can be intelligently networked to achieve even higher efficiency. This online event will take place from October 27 to Bystronic will present its vision of the Smart Factory and take a look at the current situation in China. We will also unveil our latest products in the fields of laser cutting, sheet metal bending, and the associated software solutions. You can take part free of charge. Nowadays, digital solutions and agile processes are success factors â€" also in the sheet metal processing industry. Thanks to its own high level of digital maturity, Bystronic is able to apply its targeted consulting services to rapidly advance the digital transformation of its customers towards the smart factory. Thanks to its investment in a Bending Cell consisting of an Xpert Pro press brake combined with a bending robot , the Swiss job shop Stoppani will soon also be able to produce during the night â€" completely autonomously. What are the key factors in product and service development? And is there a formula for the development of innovations? An interview with the co-founder Marcel Aeschlimann. Show more articles. With core capabilities in Advanced Analytics, Signal Processing, Cloud Computing, and Large-Scale Data Management, we design, develop, and deliver software and solutions to collect, ingest, process, analyze and present large and complex data for critical mission sets of national significance. DI2E Plugfest is the annual demonstration of advancements in the DI2E featuring DI2E Programs of Record, more than 40 vendors, 10 government agencies, dozens of demonstrations, four mashup challenge teams, and hundreds of attendees. The winning DCGS-SOF Operation Upshot Mashup was designed to address the warfighter's need for quick response to language and image translation from anywhere in the world at any time using a distributed, scalable cloud architecture. Each team member made their capabilities available in an effort to create a demonstration that showcases the orchestration of translations

microservices. EvR provides production authoring and image annotation capabilities with security markings. PMW provides workflow orchestration between operational units and personnel for completing assigned tasks. These tools seamlessly integrate with DoD cloud-based solutions, industry-standard interfaces, and strict user access controls for greater security. With core capabilities in Advanced Analytics, Signals Processing, Cloud Computing, and Large-Scale Data Management, we design, develop, and deliver software and solutions to collect, ingest, process, analyze and present large and complex data for critical mission sets of national significance. For more information, visit DI2E Plugfest is an annual demonstration of advancements in the Dept. GSA provides a centralized delivery system of products and services to the federal government, leveraging its enormous buying power to get the best value for taxpayers. NTP is an interagency program whose mission is to evaluate agents of public health concern by developing and applying analytical tools of modern toxicology and molecular biology. NTP was created as a cooperative effort to: 1 Coordinate toxicology testing programs within the federal government; 2 Strengthen the science base in toxicology; 3 Develop and validate improved testing methods; and 4 Provide information about potentially toxic chemicals to health, regulatory, and research agencies, scientific and medical communities, and the public. NTP arose because of increasing scientific, regulatory, and Congressional concerns about the human health effects of chemical agents in our environment. The objective of this health IT contract is to leverage advanced technologies for toxicology data collection and ingest, data integration, and data visualization in support of decision making. Vistronix personnel assigned to this contract are highly cross-qualified in the scientific, technical and software disciplines critical to the success of the public healt
